Hook text – Codeyoung Method Vs School Method

And that's why at Codeyoung, we teach Vedic Math and mental calculation techniques that help children solve problems faster while actually understanding the concepts behind them.

Because when students only rely on memorising formulas, even a small change in the question can confuse them. But when their fundamentals are strong, they can approach problems with clarity and confidence.

Through one-on-one live classes with a dedicated mentor, complex concepts are broken down into simple steps and students practise regularly to build both speed and accuracy.

The result is simple — faster calculations, stronger understanding, and better grades in school.
